

Renovation Inspections

The Home Inspection Hub can help you through the renovation process, whether it is a large-scale extension or a smaller alteration project to your home. We know the issues you will encounter and have created a program of building inspections to help you through each stage of the process.

How we can help

At the commencement of works, we will carry out an initial inspection, so we can assess the existing conditions of your property. This report will identify any areas that need initial attention, so there are no hidden surprises. Our inspector can then tailor the building inspections to suit your project.

The renovation inspections we offer are:

Kitchen / Bathroom / Smaller Renovation Project

- Pre-Project Condition Report
- Final Completion

Large Scale Extension Project

- Pre-Project Condition Report
- Base Stage
- Frame Stage
- Lock-up / Pre-Plaster
- Fixing Stage
- Final Inspection (PCI)

Why is it important to engage The Home Inspection Hub when renovating?

- ✓ You'll receive a photographic record, highlighting the workmanship of the construction throughout the renovation.
- ✓ Our Inspectors specialise in reporting on building projects and can be your independent source through the process.
- ✓ You can engage us for just one inspection or the complete package.
